

Dino Days at the California Academy of Sciences
March 22-May 5, 2019

This spring, sink your teeth into prehistoric fun as dinosaurs and ancient plants spring to life in the Academy's East Garden. Share a fascinating encounter with ancient dinosaurs that ruled the Earth some 75-65 million years ago in the Late Cretaceous period, including the mighty *Tyrannosaurus rex*.

See, hear, and walk among realistic life-size dinosaur models that move and roar and learn how these massive reptiles adapted for life on land. Become a paleontologist while digging for dinosaur fossils in the sand, discover ancient plants like ferns and cycads that still grow today, and learn how fossils help scientists piece together the past.

Plus, check out interactive dinosaur-themed programming and explore a diverse collection of prehistoric specimens on display throughout the museum, including touchable fossils in the hands-on Naturalist Center.
